

PLEXIGLAS® RADIANT

Cleaning Instructions

Clean **PLEXIGLAS® RADIANT** with a mild soap solution or cleaning agent and lukewarm water.

If material has a framed perimeter, take care not to allow water or moisture to pool at the sheet edges as this could affect the surface coating.

Use a soft, clean cloth and gentle pressure (no rubbing).

Make sure not to scratch the coated surface, because scratches cannot be removed by polishing this side of the sheet.
