

AIR-board® acoustic - Ceiling Panels

Hanger by point fixings

Transparent profiles

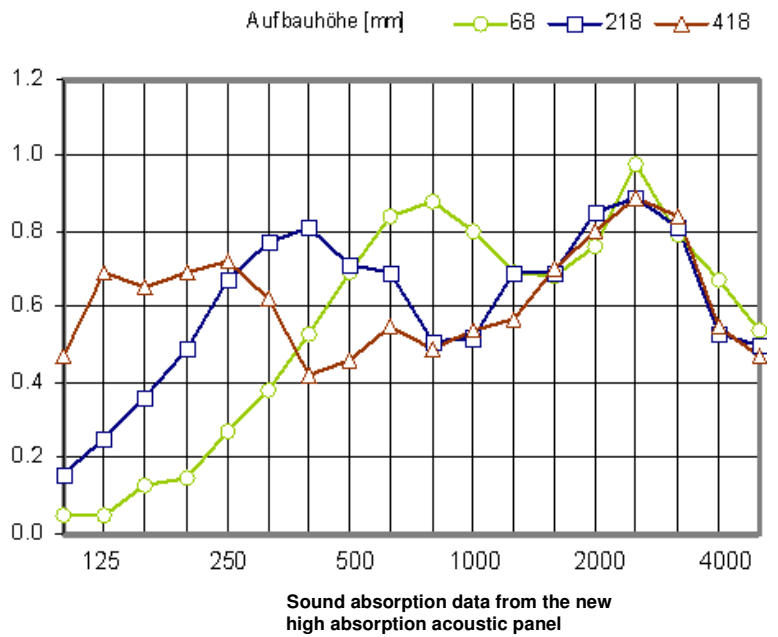

Premiere: 800 sqm absorbent lighting in a large scale project

Campus Novartis, Basel: Stretch-metal-ceiling with high-absorption lighting

Detail: Corner solution

Transparent, acoustically effective ceiling panels in harmony with architecture

The current trend of contemporary architecture is the utilisation of ever larger areas of glass. Increasingly, newly constructed or refurbished communications areas fail to meet even minimal acoustic requirements necessary for their use. The pursuit of transparency and good acoustics do not have to be mutually exclusive.

The current trend in contemporary architecture is for ever more transparency, acoustic baffle

Lining acoustic baffles up over workplaces. The pursuit of transparency and good acoustics do not have to be mutually exclusive.

Installing T-section transparency.
